

RAVENOL Windshield Sealing

Kategorie: Car care products

Artikelnummer: 1360758

100L | 1360758-100

RAVENOL Windshield Sealant protects glass surfaces by forming a durable, water-repellent surface coating. Its 100 ml content is sufficient for multiple applications on all windows of an average passenger car. The windows remain sealed for approximately 2 months, depending on washing and weather conditions. The resulting sealant has a high slip effect, ensuring that water runs off quickly and visibility is significantly improved in rainy conditions. Even on car windows, visibility is not impaired by changes in light refraction.

RAVENOL Windshield Sealant is resistant to cleaning products and many solvents, offering long-lasting protection for treated glass surfaces. RAVENOL Windshield Sealant reduces the adhesion of ice to the windshield surface in winter, making it easier to remove ice and frost layers.

Application instructions

RAVENOL Windshield Sealant is applied to thoroughly cleaned glass surfaces. First, carefully pre-clean the glass surface with a suitable glass cleaner or special degreasing cleaners such as RAVENOL Pre-Cleaner and wipe completely dry. (RAVENOL Microfiber Cloths Car Care Set)

RAVENOL Windshield Sealant is applied to the glass surface with a dry polishing fleece or microfiber cloth, spread evenly and polished.

RAVENOL Windshield Sealant should be wiped down with a slightly damp microfiber cloth, to completely remove any excess product residue from surrounding components, after a reaction time of about five minutes.

Note:

RAVENOL Windshield Sealant should be stored in sealed containers in a dry and cool place. Protect from direct sunlight, heat and frost. Keep out of the reach of children. Wash hands thoroughly after use. Ensure a supply of fresh air during indoor applications.

Characteristics

- Water-repellent gliding effect
- Resistant to cleaning agents
- Long durability of approximately 2 months
- Sealing with anti-beading effect
- Easy to apply
- Perfect for preventing frost and ice formation in winter
- For better visibility in the rain
- Neutral for refracting light on vehicle windows
- 100ml are sufficient for multiple applications for all windshields of passenger cars
